

Proof of Reserve — review notes

UNERA hUSD Portal · Stablecoin July31 build · 5 August 2026

1 How the reserve is described

Proof of reserve — title and contract addresses

The title says every hUSD is “backed 1:1 by cash and short-term U.S. government bonds”. But the reserve also holds USDC/USDT. These are not cash, and they are not government bonds.

If a user scrolls down to the composition chart, they will see the difference. Other stablecoin companies have lost trust because of this same problem: the text says one thing, the chart says another.

Listing every asset type is not a good fix, because then the text must change every time the reserve changes. Circle writes it like this:

- backed by cash and cash-equivalent assets

This stays correct when the composition changes.

2 Auditing: how often, and which word

There are two problems here. Both should be fixed before the page is shown outside the team.

How often. The PRD says audit reports are **quarterly**. The PRD never says daily. But the page says daily in several places. No stablecoin company in the market does this daily. If the team really wants to do it, the cost is too high, and the audit firm will not sign it.

Which word. *Audit* and *attestation* are not the same thing. The page uses both words, and one line uses both at the same time. Suggested words for the whole product:

- Numbers the portal publishes itself → Reserve report – as of [date]
- A third party confirms them → Attestation by [firm] – AICPA AT-C
- A full audit of the company → Audit — once a year, and only if there really is one
- Reports on the dashboard → **quarterly**, as the PRD says

The word “audit” should be removed from the page, unless there really is a full company audit. This should go to legal before FE changes any text.

3 Reserve backing box

Reserve backing · Total reserves · Last audit

The page shows **1:1** and **102.4% reserve ratio** together. This is confusing. If it is 1:1, why is it 102.4%? Both numbers are correct, but they look like they disagree.

Circle never writes "1:1" next to a percent. They write "100% backed". Better to choose one and remove the other.

4 Reserve composition & where reserves are held

Reserve composition and custodian breakdown

The page needs to show clearly which data is live, and which data comes only once a month.

Right now there is one badge **Live · updated 14s ago** at the top of the page. It looks like it covers everything below it. But custodian and maturity data comes from bank reports, once a month.

If a regulator or a journalist asks "where did the custodian number from 14 seconds ago come from?", the page has no answer.

Suggestion: remove the badge at the top, and give each block its own **as of** label:

- Network activity, circulating supply → **Live · updated 14s ago** — on-chain indexer
- Redemption coverage (cash part) → **As of [date] 00:00 UTC** — daily check
- Composition, custodian, maturity ladder → **As of 31 Jul 2026 · monthly statement** — bank report, entered by hand
- Attestation → **Period ending 31 Jul 2026** — PDF file

5 Historical Reserve Trend

The PRD asks for a “*line chart of daily reserve ratio **and** total outstanding hUSD supply over a **rolling ninety-day** window **with export capability**”.*

PRD §6.6 Transparency Dashboard:

[https://conscious-landbank.atlassian.net/wiki/spaces/~7120206e88bad7379045fb808e0bd72c8daf86/pages/61276166/UNERA+Stablecoin+Portal+Product+Requirements+Document#6.6-Transparency-Dashboard-\(Stablecoin-Layer-Only\)](https://conscious-landbank.atlassian.net/wiki/spaces/~7120206e88bad7379045fb808e0bd72c8daf86/pages/61276166/UNERA+Stablecoin+Portal+Product+Requirements+Document#6.6-Transparency-Dashboard-(Stablecoin-Layer-Only))

The chart on the page today only shows circulating supply. Checked against the source code:

- Daily reserve ratio line — **missing**. There is no ratio data anywhere in the code
- Total supply line — **yes, it is there**
- Rolling 90-day window — **now it is a 7D/30D/90D/1Y switch**
- Export — **missing**. A search of the whole file for `export` and `csv` returns 0 results

This is important. When supply goes up or down, it does not tell anyone if hUSD is fully backed. It only shows business growth. Users open a Proof of Reserve page to ask one question: “*did the backing ratio ever go below 100%?*”

Suggestion: add the reserve ratio to the same chart, with a dashed line at 100%:

And an export button, as the PRD asks.

6 Verification

The page is called *Proof of reserve*. But every number on it comes from the issuer. A user cannot check any of it.

How other companies do this:

- **Circle** — BlackRock publishes the Circle Reserve Fund holdings **every day, by themselves**. So a third party says it, not Circle
- **Paxos** — attestation every month, plus a detailed list of holdings
- **hUSD today** — only a PDF to download

Three things that could be added:

1. **SHA-256 hash of each PDF**, shown next to the download button. Then anyone can check that the file was not changed
2. **Bank names** — the custodian panel already does this. That is good. Circle also publishes bank names
3. **Chainlink Proof of Reserve feed** (roadmap) — this puts the reserve value on-chain. Then smart contracts and other people can read it directly, and they do not need to trust the frontend. For a stablecoin backed by fiat, this is the closest thing to a real “proof”

7 Status · Active

Even if this moves to a developer docs page, the label still needs an explanation. The explanation given in the thread was “Active = in auditing, Inactive = not used”. But the words “Active” and “Inactive” alone do not tell the reader this.

Suggestion: In current attestation / Superseded .
